# Dynamiq Jetsetter | 12 Top Yachts from the Monaco Yacht Show

*Michael Verdon*

**Dynamiq**'s first-ever launch, **Jetsetter**, made quite a splash at the Monaco show. The D4 model, with its eagle's head profile, was designed to incorporate the feel and features of a larger superyacht into its compact, 127-foot hull. The Gran Turismo Transatlantic (GTT) design by Dutch naval architects Azure Marine incorporated the best of all worlds into its fast displacement hull—21-knot top end, draft of only 5 feet 9 inches, and a range of 3,000 miles at 10 knots.

On a tour of *Jetsetter*, I was most impressed with the interior by

Bannenberg & Rowell. The London designers used loose couches, chairs, and other accessories in the saloon and staterooms, rather than building in fixed furniture, so it had the feel of a contemporary waterfront pied-à-terre, rather than the more formal look of many yachts. The saloon's large picture windows, combined with its generous 7-foot, 8-inch headroom and 25-foot beam, gave the area a much larger feel than most yachts in its class. It connects to a dining room that also seems voluminous, without being stodgy. The same sense of space occurs in the full-beam master suite, located aft on the lower deck, as well as the three other staterooms forward.

Bannenberg & Rowell maintained the elegant, informal feel across *Jetsetter* by using light colors and a hexagonal motif that showed up everywhere—on walls, in carpet patterns, and even on tables on the flybridge. *Jetsetter's* flybridge, by the way, makes a wonderful gathering point, with its Jacuzzi, dining table, and many loungers. It also boasts an outdoor theater. *Jetsetter* is certainly a strong start for Monaco-based Dynamiq, promising to be the first of many superyachts incorporating its forward thinking in both the structural engineering and interior design.
